

This is the guide to configure Internet Download Manager to use with HTTP Tunnel.

It is useful if your proxy/firewall blocks downloading certain types of file e.g. downloading .avi or .exe files

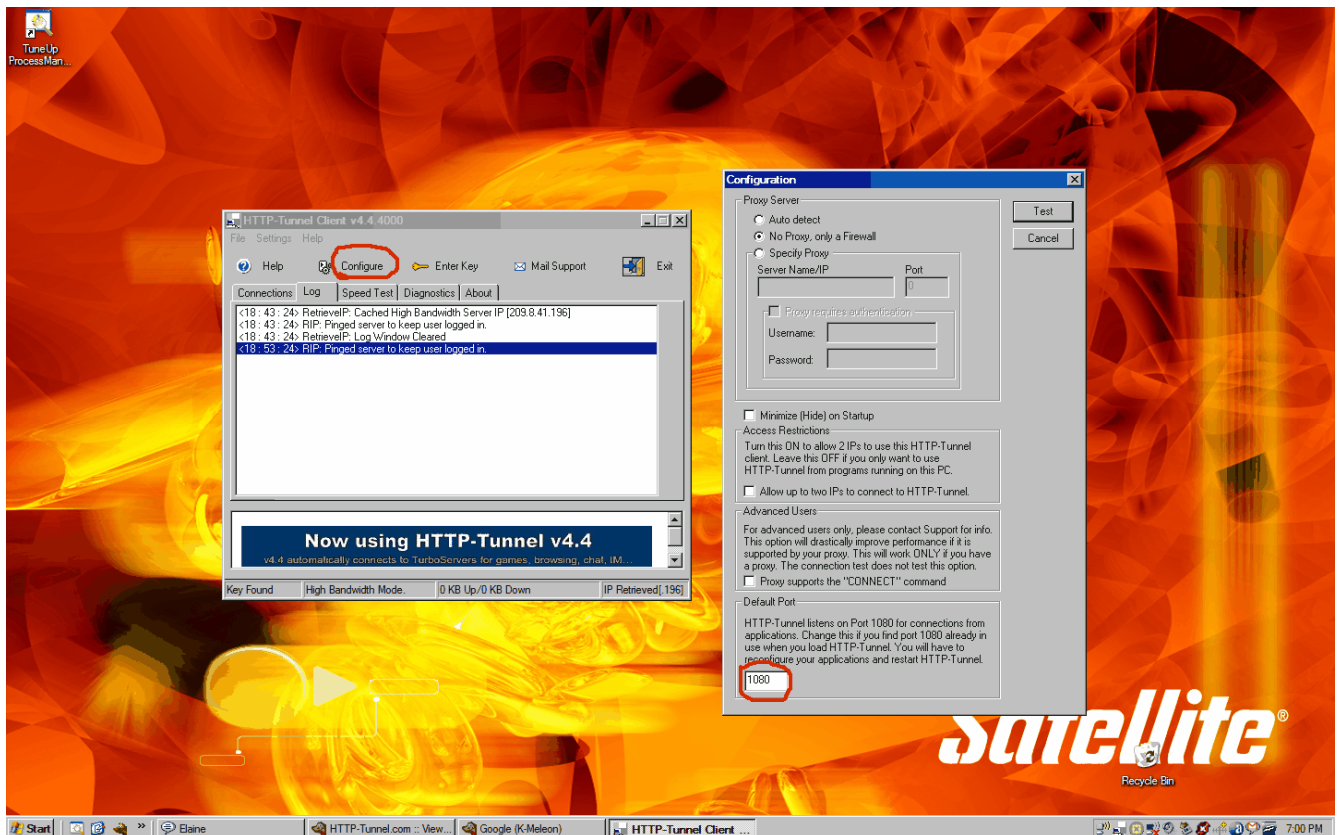

Also it is better than using your Web Browser to download since the DAP supports multiple streams in downloading,giving you better speeds

Please note that its only a configuration guide,we do not provide any support related to this specific client.

Once you have Http-Tunnel installed, run the application, The main window will appear, choose the configure option. There you will be presented with three (3) options.

1. You can Select Auto detect if you want Http-Tunnel to detect your settings.
2. No Proxy, only a firewall if this is appropriate.
3. Specify Proxy, Here you will enter the IP address and Port number of the proxy that you use.

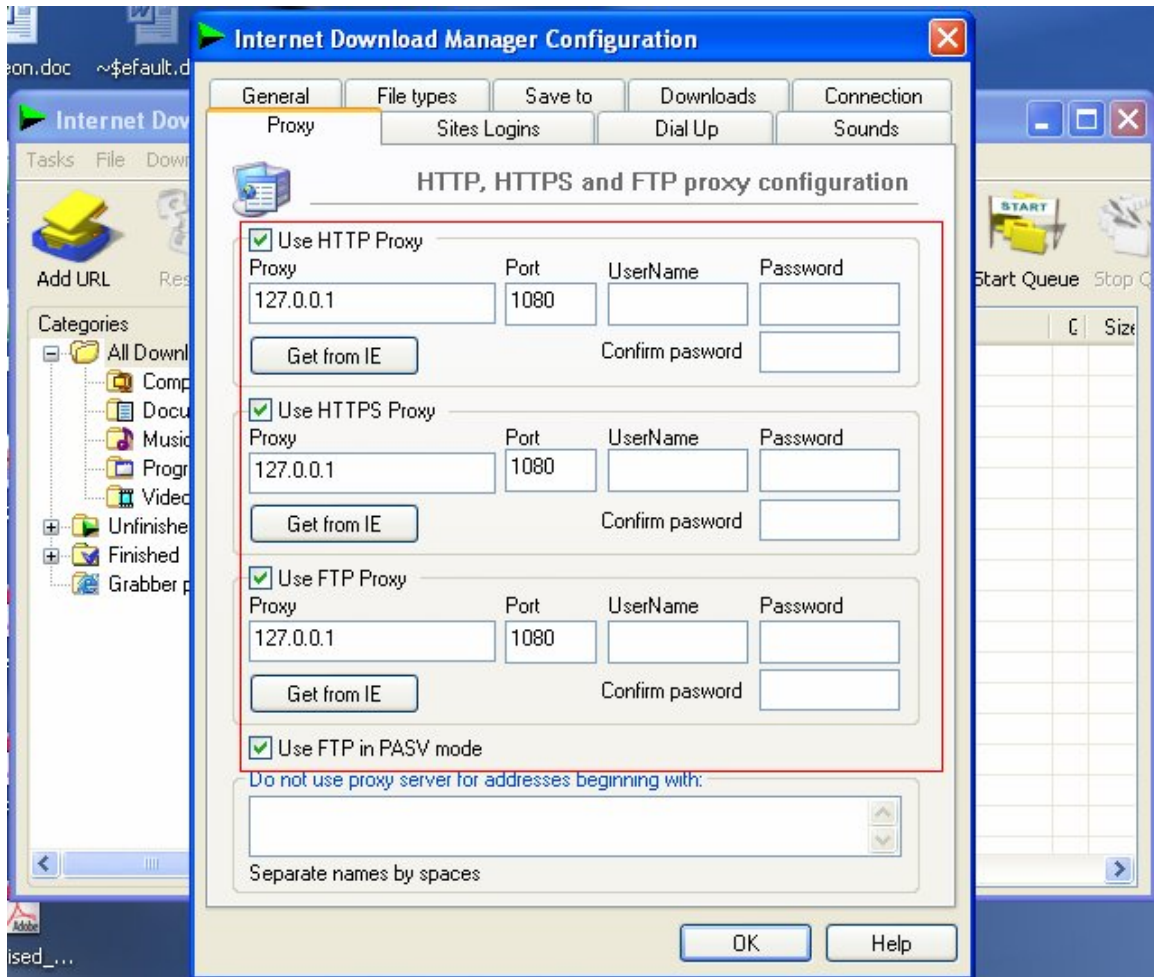

Complete 1 of the 3 options, then click test, the client will bind to port 1080 and localhost by default and connect to the tunnel servers if your settings are correct.

Open Internet Download Manager(IDM)

Click on Options tab in the window and then go to Proxy

Select on all the Proxy Options and fill 127.0.0.1 for proxy and 1080 for port

You should see it connecting via HTTP Tunnel and downloading via it

HTTP-Tunnel Client v4.4.4000
